SKILLS

Languages

TypeScript, JavaScript, Python

Frontend

React Native, Expo, React

Backend

.NET, Python (FastAPI), Firebase

Tools & Infra

Git, EAS Build, Google Apps Script, Linux

EDUCATION

B.Sc. Information Technology

Kirti M. Doongursee College, University of Mumbai

Final year — result awaited

SUMMARY

Full-stack developer with 2+ years of hands-on project experience across React Native/Expo, React, and backend systems spanning .NET and Python. Comfortable owning a feature end-to-end — from payment integrations and state management to root-causing subtle, multi-layered production bugs. Has independently built and shipped multiple complete systems, including a business ERP and a customer-facing e-commerce platform.

EXPERIENCE

Frontend Developer

Sep 9, 2026 – Present

VAS Infotec

- Own a dedicated branch on NEETMobileApp, working semi-independently within the team's Expo/EAS build pipeline
- Root-caused and fixed production bugs spanning frontend state (Redux persistence gaps), backend data joins (stale subscription status), and cross-platform file-upload handling
- Conducted structured QA testing across app screens, producing test-case documentation and bug tracking for the team

PROJECTS

NEET India

[play.google.com/store → com.vasinfotec.neetindia](https://play.google.com/store/apps/details?id=com.vasinfotec.neetindia)

React Native/Expo exam-prep platform — live on Google Play

- Built exam-prep platform with registration/OTP flows, Razorpay-based subscriptions, and a full quiz/scoring engine using Expo Router, Redux Toolkit, and TypeScript, backed by a .NET/MySQL API
- Diagnosed and fixed a multi-layered profile-picture upload bug on web — traced a silent data loss through a type-validation layer and an Axios header-merge quirk that caused binary uploads to be silently JSON-stringified
- Built an AI-generated MCQ feature: a Python FastAPI service using OCR and multiple LLM providers to generate quiz questions from uploaded exam papers
- Fixed subscription-gating logic so free/expired status no longer showed stale post-purchase, and corrected proration and dashboard-refresh bugs

Mazz — Business Management System

s-r-enterprise.vercel.app

Sales, inventory & accounts ERP — React 19, Redux Toolkit Query, Firebase

- Built a full internal ERP-style web app covering sales invoicing, purchases, stock and warehouse transfers, bank/party ledgers, expenses, and due-date tracking
- Implemented role-based admin and developer panels, including a DB inspector, access logs, and error reporting for internal diagnostics
- Built sales analytics and reporting — category-wise and year-over-year graphs, printable/PDF invoices (single and bulk), and exportable reports
- Designed multi-location payment flows and inter-warehouse stock transfers to match real business operations across branches

Patisserie Noir

patisserie-noir-snowy.vercel.app

Cake ordering platform with admin backend — React, Zustand, Tailwind

- Built a full customer-facing ordering site (catalog, cake customizer, delivery slot picker, coupons, PDF invoice + WhatsApp order confirmation)
- Built the entire backend on Google Apps Script over Google Sheets (14 sheets) — orders, customers, inventory, coupons, testimonials, and Drive-backed image uploads
- Built an admin panel with order management, customer/CRM tools, and a revenue/analytics dashboard (daily/weekly/monthly, top items, status breakdown)
- Added a content/blog (CMS) system with draft/publish workflow, covered with Vitest + Playwright test suites
